TEXON SUCCESS IN ECO-FRIENDLY CELLULOSE DISKS

Texon's world-class cellulose technology finds demand increasing for the Möckmühl-produced eco-friendly product – Texon Tree Disks.

The Texon Tree Disk is a weather-resistant protection disk that is ideal for gardens, forestries and plantations designed to:

- Protect saplings from lack of nutrients and water due to the growth of grass and weeds
- Prevent soil erosion and help root growth
- Create an ideal soil climate for useful micro-organisms
- Keep its form even under rain

The Tree Disk is made from 0.90mm latex-impregnated T601 cellulose material. The material is available in sheets, rolls or as cut disks, and as it contains 90% pure cellulose, it is also bio-degradeable.
