STEP INTO A WORLD OF CREATIVITY

Discover ProWeave, our revolutionary material that sets free a designer's imagination. Like never before, ProWeave combines creativity and functional weaving with the most advanced techniques. ProWeave brings to life uppers in jacquard fabrics where zones of differing elasticity, stability, and abrasion unite seamlessly.

INNOVATION

Innovation is a leap into the unknown; it's movement; it's a change in outlook. Innovation is radical, free, and it's in our DNA. That's what the innovative ProWeave fabrics were born to do. To unleash new possibilities in development and creation. To offer endless unique functionalities. To set designers free as they turn their vision into reality.

FUNCTIONALITY

This innovative material allows for multidirectional zonal stretching, and the creation of personalised yarns to each designer's specifications. The properties of ProWeave exceed those of Dobby technical fabrics and offer greater design freedom within a single productive process. ProWeave also provides better structural support – stronger than knitted uppers.

SUSTAINABILITY

ProWeave is designed to support our industry's sustainability drive. Using a single efficient process to create woven uppers with localised features means less energy consumption for manufacturers. We offer advice on the use of compatible fibres and recycled yarns to build recyclable structures for circular projects. All offcuts are suitable for recycling. ProWeave is supported by Texon Group Zero Waste Programme.

A WORLD OF POSSIBILITIES

A novel innovation allowing designers to imagine, design and develop zones with technical and aesthetic functionalities:

- > Effortlessly blend diverse yarn thickness and weights, and fabric references and colours together with distinctive gradient, rib, waffle and 3D effects to create unique woven combinations on the same loom
- > Numerous finishing possibilities: coatings, membranes, linings (mesh, stretch), foams, paddings, thermic insulation, (PFC free), printing, dyeing, mechanical and chemical treatments
- > Stronger, enhanced structural support compared to knitted uppers
- > Flexibility of supply
- > Derived from Texon's Italian division's track record in the manufacture of unique textile materials with production also available at Texon's new Vietnam facility
